

Broader Availability Enables More Businesses to Improve Flexibility and Response Times and Gain IT Expertise without the Associated Increase in Overhead

RYE BROOK, N.Y. -- (Business Wire) – January 6, 2009 - Broadview Networks, a leading business communications provider, today announced expanded availability of its Professional Services portfolio throughout its entire geographic footprint. Broadview's Professional Services offering is broken into three major service categories; Network Design, Implementation and Management; Data Center Solutions; and IT Engineering. These services augment Broadview's Total Solution approach by providing businesses with reliable IT expertise and support.

Broadview's Professional Services team of highly trained and certified technicians and engineers are available on-demand, either on-site or virtually. This hand-selected team can act as an outsourced IT department for smaller businesses or on a project basis to address knowledge gaps, increase resources or serve as a management layer for local staff. Broadview's Professional Services offer customers predictable expense management and enable in-house resources to focus on core strategic initiatives.

"Professional services are a natural extension of Broadview's total solution method of addressing unique business requirements with a customized blend of products and services," said David Dickson, Vice President of Total Solution Sales. "Our real goal is to enhance customer productivity by delivering services and other advanced technology solutions that help businesses compete and operate more efficiently, irrespective of geographic location."

The Professional Services model builds upon Broadview's vast experience with traditional network access solutions like T1s where engineers conduct site surveys and dedicated project teams manage end-to-end delivery. It also builds upon Broadview's more recent success with next-generation technologies like VoIP phone systems and network firewalls where core equipment can be either premise-based or hosted for the customer.

The geographic expansion of Broadview's Professional Services allows more businesses to have a single vendor for nearly all their communication and technology needs, even as they evolve. From typical IT projects like physical moves, system upgrades and maintenance to more complex ventures including network security, traffic engineering or data center implementations; Broadview's Professional Services cover a wide spectrum of IT related support functions.

Broadview Networks Professional Services is an authorized partner of Cisco, Nortel, Dell and Microsoft, and recommends many of their products as part of the Broadview Total Solution.

About Broadview Networks (www.broadviewnet.com) Broadview Networks is a network-based business communications provider serving customers throughout the Northeast and Mid-Atlantic U.S. Broadview provides the total solution for business communications including local and long distance voice communications; hosted and premises-based VoIP systems; data services encompassing VPN- and MPLS-enabled applications; traditional telephone hardware; high-speed Internet services; a full suite of managed services; and a range of professional services. Broadview customers benefit from award winning customer service including a web-based account management tool and a primary point-of-contact for real-time, personal customer care.

Broadview Networks is a control investment of MCG Capital Corporation (NASDAQ: MCGC). Broadview Networks' largest investors are MCG Capital, Baker Capital, and New Enterprise Associates.
