

Interxion showcases its data centre services to the US market

Interxion is a Gold Sponsor of Data Centre Dynamics conference in San Francisco

Amsterdam, June 21, 2007 - Interxion, the leading provider of carrier-neutral data centre and managed services in Europe, today announced that it is a gold sponsor of the 4th Annual Bay Area Data Centre Dynamics Conference & Expo, taking place 13th July 2007 at the Hilton Hotel in San Francisco, USA.

This year the San Francisco conference's agenda will incorporate "the next big data centre challenge", a popular track of the UK Energy Summit that took place in February this year. This track will employ a multi-speaker discussion format to help data centre owners/operators develop energy-efficient design, build and operation strategies based on peer experiences, an appreciation of new technologies and best of breed engineering practices.

The Data Centre Dynamics Conference & Expo series has rapidly established itself as one of the leading sources of information attracting the largest gathering of professionals involved in the design, construction and management of 24/7 mission critical IT facilities in many of the world's business cities.

In 2006, Data Centre Dynamics visited 13 major cities on four continents. Over 5,000 data centre professionals visited the events to learn more about data centre design and management. In San Francisco, Interxion will have a significant presence at the event as gold sponsor.

Anthony Foy, Group Managing Director of Interxion, commented: "The US has truly embraced the concept of outsourcing the data centre services. Increasingly, US corporates are also looking to deploy the concept in Europe in order to support their expanding European operations. We are looking forward to share our expertise and knowledge of the European market with conference delegates in San Francisco."
