

Interxion Completes Austrian Data Centre Expansion

VIENNA, July 30th 2008 - Interxion, a leading European provider of carrier-neutral data centres, today announced that it has completed the expansion of its Vienna data centre, creating approximately 500m² of additional equipped space. The new space brings the total amount of equipped space in the company's Vienna data centre to around 3,500 m². A quarter of the new space has been signed for by customers, and installations have already begun.

The Vienna expansion addresses a steady rise in demand from both prospects and customers for highly secure outsourced IT and telecommunications hosting facilities with access to multiple carrier networks.

The new space supports a wider range of power configuration options, including high density configurations, following the upgrade of the centre's power supply from 2.5MW to 10MW. The centre also features free air cooling to maximise energy efficiency.

"Our Vienna data centre now provides an even more attractive prospect for high-end data centre users looking for high capacity power availability, connectivity and energy efficiency," said Christian Studeny, Managing Director, Interxion Austria. "Consistently rising demand in the sector allows us to upgrade as we extend, and we will continue to review the space and power specifications demanded by the market, in order to keep ahead of customer and prospect needs."

About Interxion

Interxion is a leading European provider of carrier-neutral data centres. Headquartered in Schiphol-Rijk, The Netherlands, Interxion serves its customers from its 23 carrier-neutral data centres located in 13 cities across 11 European countries. Interxion serves network and carrier-based, hosting and enterprise customers who require professionally managed and strictly controlled physical environments within which to operate mission-critical applications and computer systems. Interxion's carrier-neutral data centres offer cost-effective and fast access to multiple local and global communication networks.
