

Interxion increases investment in data centre expansions to EUR 90 Million

Interxion recently secured a second flexible credit facility of EUR 30 Million with Fortis and Rabobank

Amsterdam, September 11, 2007 - Interxion, the leading provider of premium carrier-neutral data centre and managed services in Europe, today announced that it is investing an additional EUR 40 Million in the next phase of its data centre expansions across Europe adding approximately 5,000 sqm of net sellable space. This brings the total committed Interxion footprint expansion in 2007/2008 to 13,000 sqm of net sellable space.

To finance this expansion plan, Interxion has successfully secured an additional EUR 30 Million flexible credit facility with Fortis Amsterdam, acting as Arranger, and Rabobank. This brings the total credit facility available to Interxion up to EUR 62.5 Million. The new data centre space will be facilitated in London, Frankfurt, Madrid, and Brussels. Expansions in London, Madrid and Brussels will be available as soon as Q1 2008. The new data centre in Frankfurt, which will be the fifth Interxion data centre in the city, is planned to be operational in Q3 2008.

“As part of our long-term growth plan, and in a drive to meet increasing customer demand, Interxion is further expanding its data centre footprint across Europe, adding 5,000 sqm to the previously announced 2007 expansion of 8,000 sqm, from which some 60% is already sold out,” said Anthony Foy, Group Managing Director of Interxion.

“Following continued increase in demand for data centre services in 2007, Interxion is on track to continue to deliver strong year-on-year revenue growth. With this investment, Interxion is best positioned to be the company of choice to guarantee uninterrupted growth for our customers,” said Anthony Foy, Group Managing Director of Interxion.

About Interxion:

Interxion is Europe's leading provider of carrier-neutral data centre and managed services. With 22 data centres across Europe, it has the largest data centre footprint and supports over 1,000 customers including enterprises, systems integrators, Internet Service Providers, hosting and telecommunications companies. In Interxion data centres customers have access to 15 major European Internet exchanges and 460 ISP/Carrier networks. Interxion data centres meet the most stringent industry requirements, offering highest level of security, 2n availability of power, and a multiple and cost effective choice of connectivity solutions.

Interxion has unparalleled experience in designing, delivering and operating the ultra high power density solutions supporting blade server environments with up to 20 kW per rack.
