

## Message Secure Introduces FedLine Advantage Integration Service

*Offering Streamlines Conversion to New Services*

**LOWELL, MA – November 1, 2005** – Message Secure Corporation, the leading provider of managed security services to banks, credit unions and their data centers, is offering a new service aimed at helping institutions manage the conversion from the Federal Reserve Bank's DOS-based reporting system to its new VPN-based access system known as FedLine Advantage.

FedLine Advantage was launched by the FRB in 2004 to enable member banks and credit unions to use a simpler and more secure VPN-based portal to access critical payment offerings such as Fedwire Funds, Fedwire Security Service and FedACH. To assist institutions with the complexity of installing and configuring FedLine Advantage, Message Secure now offers a full installation management initiative through its Compliance Assurance™ Services consulting organization. Over the past several months, the MSC FedLine Advantage Integration Service has helped senior management at dozens of financial institutions to understand both the advantages and risks associated with each potential configuration option before making a choice. The service also provides IT teams at these institutions with an experienced point-person to plan, coordinate, install, secure and test the final solution on their behalf.

"As with any technology conversion, there is a certain amount of trepidation about this process, particularly when these changes impact the risk profile of the institution," said Brian Costello, director, Compliance Assurance Services. "By leveraging our strong expertise in both compliance and security technology, we're helping institutions achieve operation goals through the required risk-based approach while and ensuring a smooth transition to FedLine Advantage."

The MSC FedLine Advantage Integration Service is available today to any financial institution converting to FedLine Advantage. Fees are based on the institution's particular configuration requirements.

### **About Message Secure**

Message Secure Corporation delivers Compliance Assurance™ solutions to protect your institution, achieve regulatory compliance and keep IT costs under control. Hundreds of banks, credit unions and their data centers enjoy the protection we provide through VSecurity™, our regulatory-grade 24/7 network security service; secure email through our VSecure™ Mail service; and secure electronic delivery of sensitive and protected documents through PrivateExpress™ service. We complement our managed services with Compliance Assurance Services, a range of professional security services geared specifically for financial institutions. And because we're 100% focused on the needs of financial institutions, our sales, installation, consulting and customer service teams spend all day, every day focused on the unique needs of community banks and credit unions. Compliance is your business; that's why we make it ours. For more information on Message Secure's complete range of security services for community financial institutions, visit [www.messagesecure.com](http://www.messagesecure.com).
