

Interxion to manage IT platform of the Netherlands Olympic Committee and Sport Federation

12-12-2006 - Amsterdam - Interxion, the leading provider of premium carrier-neutral data centre and managed services in Europe, today announced that it will host the Netherlands Sportland Digital (NSD) platform on behalf of the Netherlands Olympic Committee and Sport Federation (NOC*NSF) in its Amsterdam data centre. The complete management and the backup of this complex platform will be provided by Interxion and its partner Dedigate.

The NSD platform of NOC*NSF is the largest IT platform that is used to support 29 sport organisations in the Netherlands. Since 2001, it has rapidly grown to be used today by 2,8 million members. The platform is highly automated and has managed 600.000 members' transactions in 2005, and administered 1,9 million owners of the Netherlands Sport Pass in 2006.

“We have outsourced our first managed hosting solution to Interxion in 2002. Since then they provided us unparalleled levels of technical support and customer service“, said Henk Karman, program manager of NOC*NSF. “The decision to outsource the hosting of NSD platform to Interxion this time was taken after five months of rigorous evaluation, as they provided the best fit for our requirements now and into the future. As we expect the number of registered members to reach four million in 2007, it is important for us to know that Interxion has the resources and capabilities to scale the services accordingly.”

“We deliver NOC*NSF a portfolio of managed hosting services that is customized for their specific requirements“, said Michel van den Assem, Managing Director of Interxion Netherlands. “To guarantee maximum up-time to NOC*NSF, we are working together with our partner Dedigate who are taking care of the critical IT infrastructure management,” continued van den Assem.

About Interxion:

Interxion is Europe's leading provider of premium carrier-neutral data centre and managed services. With 20 data centres across Europe, it has the largest footprint and currently supports 1,000 customers including enterprises, systems integrators, Internet Service Providers, hosting and telecommunications companies.
